A clear place to start.

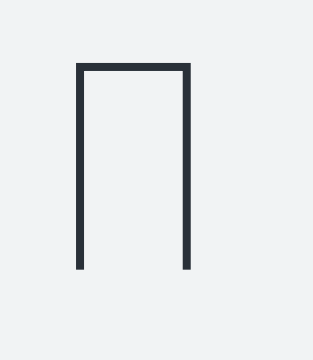

Understand the parts. Build one bay. Add modules when you need them.

CONCEPT GUIDE

This diagram explains a modular frame concept. Follow the instructions and hardware supplied with your actual product. Connections and parts may differ.

01 Identify every component.

Work on a level, protected surface. Check parts and hardware before assembly.

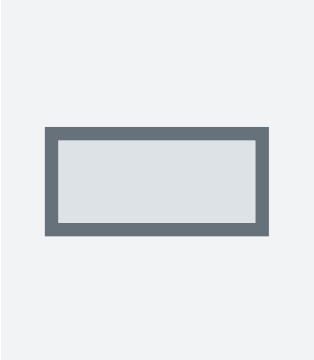

A / SIDE FRAMES

Check orientation

B / CROSS RAILS

Match connection points

C / SHELVES

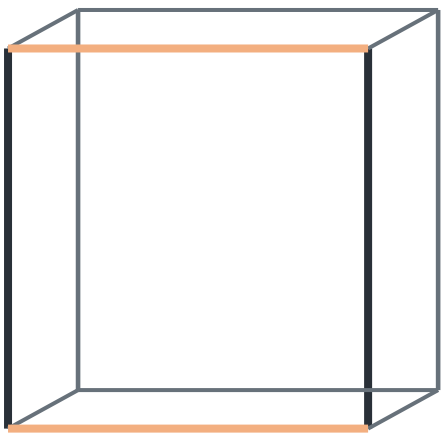

Check front and rear

D / HARDWARE

Use supplied fixings

02 Connect the frame.

Stand the side frames parallel. Join the upper and lower cross rails using the supplied connectors.

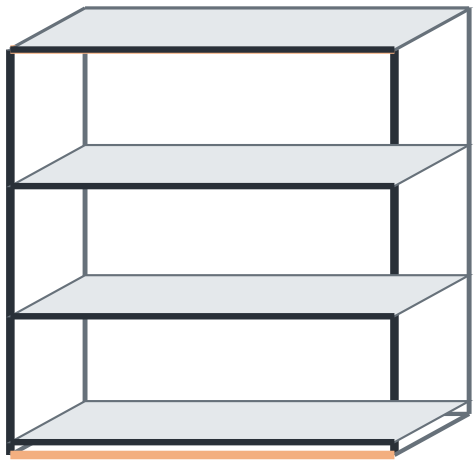

Start all fasteners by hand. Keep the frame square. Tighten in the sequence shown in the product manual.

Do not climb or sit on the frame. Keep children clear of the assembly area.

Build. Check. Put in place.

A tidy finish starts with a stable, correctly assembled frame.

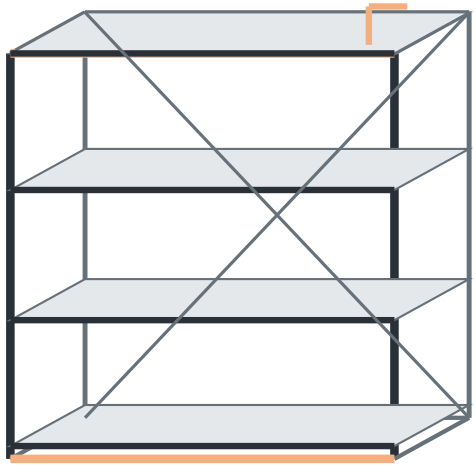

03 Fit the shelves.

Fit each shelf to its intended supports. Make sure every corner is fully seated before moving to the next level.

Check shelf orientation and any retaining clips against the product manual. Never force an incompatible part.

04 Secure and level.

Install all required braces and anti-tip restraints. Choose wall fixings suitable for the wall construction and the product.

Adjust the feet so the frame sits level. Recheck every connection before use, then add items from the lowest shelf upward.

BEFORE EVERYDAY USE

Follow the actual product load limits. Place heavy items low. Check fixings periodically. Keep clear of power cables when fitting lighting or drilling. Ask a qualified installer if unsure.
